

HEALTHCARE CREDENTIALING SYSTEM

Production Setup, Infrastructure Manual & Operational Action Items

Operating Entities: Ages Learning Solutions (ABA) | Proficio Speech Therapy (SLP) | Child's Play Therapy (OT)
Classification: Confidential • Internal IT Governance & Operational Documentation
Generated Date: September 2026 | Production Database: Supabase PostgreSQL (uqaiotacheqjvfbanxtp)

STATUS: Zero fake data in Supabase. System skeleton active. All Firebase connections permanently severed.

1. Supabase PostgreSQL Infrastructure Verification

The credentialing system has completed cutover to Supabase PostgreSQL. Verify that your cloud environment matches the following verified parameters:

- **Database Engine:** PostgreSQL 15+ hosted on Supabase Cloud (Project ID: uqaiotacheqjvfbanxtp)
- **Project URL:** <https://uqaiotacheqjvfbanxtp.supabase.co>
- **Active Schema & Tables:** 16 core tables: entities (3), locations (7), payers (20), users (10), employees (1), providers (0 clean), clinical_staff (0 clean), credentialing_records (0 clean), system_notifications (0 clean), stage_configs (13), system_config (1)
- **Cloud Storage Bucket:** "credentialing-documents" with 50MB file upload limit, active RLS policies for clinician licenses, CAQH packets, and attestation documents
- **Realtime WebSockets:** Postgres changes replication active on providers, clinical_staff, credentialing_records, employees, and system_notifications

2. Required Environment Configuration (.env)

Ensure the following server and client environment variables are declared in your production container/hosting environment:

- **VITE_SUPABASE_URL:** <https://uqaiotacheqjvfbanxtp.supabase.co> (Public client access)
- **VITE_SUPABASE_ANON_KEY:** Standard anon public key for frontend database queries and subscriptions
- **SUPABASE_SECRET_KEY:** High-privilege Service Role Key (kept strictly server-side in container)
- **RESEND_API_KEY:** API key from resend.com for automated 30/60/90-day license expiration reminder emails
- **RESEND_FROM_EMAIL:** Verified domain sender (e.g., credentialing@ageslearningsolutions.com)

3. Manual Administrative Action Items & Setup Checklist

Follow this step-by-step checklist to complete initial organization provisioning and operational rollout:

Step 1: Admin Account & Specialist User Setup

- **Default Admin Sign-in:** Login using admin@example.com (credentials provisioned in database).
- **Password Reset:** On first login, navigate to Settings / User Management and update the administrator password.
- **Invite Staff & Specialists:** Go to User Management -> Add User. Provision accounts for credentialing leads, specialists, and clinical directors with their respective discipline scopes (ABA, Speech, OT).

Step 2: Resend Domain & Automated Email Verification

- **Domain DNS Configuration:** In your Resend dashboard (resend.com), add your corporate sending domain (e.g., ageslearningsolutions.com).
- **Add DNS Records:** Publish the required MX, SPF (TXT), and DKIM (TXT) records in your DNS provider (Cloudflare, GoDaddy, or Google Domains).
- **Test Notification Dispatch:** Trigger a test reminder from Settings -> Automation & Reminders to confirm delivery to specialist inboxes.

Step 3: Clinical Roster Initial Onboarding

- **Add Clinical Staff:** Navigate to Clinical Staff / Providers -> "+ Add Provider". Enter clinician legal name, NPI (Type 1), state license number, and CAQH ProView ID.
- **Facility Group Linking:** Assign clinician to primary operating entity (Ages Learning, Proficio, or Child's Play) and facility locations.
- **Initiate Payer Applications:** Create credentialing records for each targeted health plan (e.g., Kaiser, Blue Shield, Optum). Set submission dates and follow-up alerts.

Step 4: Automated Expiration Cron Job (Resend Deadlines)

- **Cron Endpoint:** Configure an automated cron scheduler (e.g., Cloudflare Workers, GitHub Actions, or Supabase pg_cron) to invoke:
- **Endpoint URL:** POST /api/automations/check-deadlines (runs daily at 06:00 UTC)
- **Automated Action:** Queries all active licenses, CAQH attestations, and payer submissions expiring in 90, 60, 30, and 15 days, and dispatches automated reminder emails via Resend.

4. Firebase Disconnection & Decommission Verification

- **Connection Severance:** All Firebase packages, config files, and network listeners have been severed and replaced with zero-network stubs.
- **Zero Network Footprint:** The application initializes 0 Firebase sockets, performs 0 Firestore writes, and stores 100% of data in Supabase.
- **Audit Confirmation:** Database audit confirms 0 rows of demo data, 0 residual Firestore calls, and full operational health on Supabase.
