

HEALTHCARE CREDENTIALING & ROSTER MANAGEMENT SYSTEM

Comprehensive Technical Documentation, Implemented Architecture & Development Status

CONFIDENTIAL • AGES LEARNING SOLUTIONS | PROFICIO SPEECH | CHILD'S PLAY THERAPY

1. EXECUTIVE OVERVIEW & PURPOSE OF THE SOFTWARE

This software is an enterprise-grade Clinical Credentialing, Health Plan Enrollment, and Facility Linking Management System designed specifically for multi-entity pediatric behavioral and rehabilitative therapy organizations operating across California and adjacent markets. It consolidates provider operations for Ages Learning Solutions (ABA), Proficio Speech Therapy, and Child's Play Therapy (OT).

The platform automates the complex multi-step credentialing lifecycle: from clinical onboarding, CAQH ProView attestation, and Medi-Cal PAVE enrollment, to payer application preparation, committee turnaround tracking, and critical facility group linking required for dual-verification insurance billing claims.

2. MULTI-ENTITY & DISCIPLINE SCOPE

- **Ages Learning Solutions (ABA):** Manages BCBA's, BCaBA's, and clinical directors with specialized BACB taxonomy tracking, supervisee linking, and regional commercial/Medicaid ABA authorizations.
- **Proficio Speech Therapy:** Oversees SLPs and CF-SLPs with ASHA CCC-SLP certification verification, California Speech-Language Pathology & Audiology & Hearing Aid Dispensers Board renewals, and school-district/commercial payer contracts.
- **Child's Play Therapy (OT):** Tracks OTR/Ls and COTAs with NBCOT credentials, California Board of Occupational Therapy licensing, pediatric specialty endorsements, and clinic-based facility billing links.

3. CORE SOFTWARE ARCHITECTURE & TECH STACK

- **Frontend Architecture:** React 19, TypeScript 5.8, Vite 6, Tailwind CSS 4, Motion/React animation engine, Lucide-React icons, and Recharts analytics.
- **State & Context Layer:** CredentialingContext engine with real-time reactive KPI calculation, multi-filter query pipelines, and transactional stage history tracking.
- **Data Schema & Types:** Strict TypeScript interfaces covering Providers, Applications, Payers, Legal Entities, Facilities/Locations, Audit Logs, and Power BI Star-Schema models.
- **Export & Reporting Engine:** Native XLSX/Excel parser & writer, formatted CSV export generator, browser print stylesheet engine, and Power BI DirectQuery JSON payload generator.

SECTION 4: FUNCTIONAL STATUS — WHAT WORKS PROPERLY

Detailed review of all completed, tested, and operational capabilities in the codebase

A. Management Dashboard & Executive Metrics

FULLY IMPLEMENTED

10 Core KPI Cards — Real-time counters for Total Providers, Total Applications, Submitted, Pending, Approved, Requiring Action, Overdue, Rejected, Avg Cycle (Days), and Group Linking Rate.

FULLY IMPLEMENTED

Aging Analysis Engine — Interactive aging distribution across 0-30, 31-60, 61-90, 91-120, and 120+ days with dynamic percentage workloads and drill-down filters.

FULLY IMPLEMENTED

Lifecycle Pipeline Flow — Stage transition counts across Intake, Prep, Submitted, Payer Review, Approved, and Linked/Effective.

FULLY IMPLEMENTED

Action Required Queue — Auto-flags overdue items, lapsed follow-up dates, and outstanding payer requests.

B. 5.11 Specialized Executive Oversight Views

FULLY IMPLEMENTED

5.11.2 By Discipline View — Granular performance cards and comparison tables for ABA, Speech, and OT covering provider counts, approvals, cycle times, and CAQH compliance.

FULLY IMPLEMENTED

5.11.3 By Payer Matrix — Turnaround performance table across all commercial health plans, Medicaid HMOs, and Medi-Cal PAVE portals.

FULLY IMPLEMENTED

5.11.4 By Specialist View — Workload balancing, assigned record queues, completed counts, and follow-up tracking per credentialing coordinator.

FULLY IMPLEMENTED

5.11.5 By Location Matrix — Clinic readiness, provider rosters, covered payers, and satellite expansion approval tracking.

C. 5.11.6 & 5.11.7 Standardized Reporting Suites

FULLY IMPLEMENTED

5.11.6 Weekly Report — Generates 7 core metrics (New Apps, Submitted, Follow-ups Due, Overdue, Docs Requested, Approvals, Escalation Log) with CSV export and print view.

FULLY IMPLEMENTED

5.11.7 Monthly Report — Full 10-section report covering Provider Updates, Payer Updates, Submissions, Approvals, Effective Dates, Pending, Delays/Moratoriums, Additional Docs, Accomplishments, and Upcoming Actions.

FULLY IMPLEMENTED

Power BI DirectQuery Export — Generates normalized Fact/Dimension star-schema dataset with one-click JSON copy and REST endpoint format.

D. Operational Tracker & Data Management

FULLY IMPLEMENTED

Master Tracker (Dual View) — Full Kanban drag-and-drop board + multi-column tabular view with search, multi-filter, and inline stage transitions.

FULLY IMPLEMENTED

Facility Group Linking Matrix — Dedicated dual-verification matrix ensuring clinicians are linked to legal entities & facility NPIs before billing claims.

FULLY IMPLEMENTED

Excel / CSV Import & Export — Spreadsheet parser with column mapping, schema validation, duplicate detection, and instant state ingestion.

SECTION 5: IN-PROGRESS & FUTURE DEVELOPMENT ROADMAP

Summary of features yet to be fully coded, external integrations, and architectural milestones

5.1. FEATURES YET TO BE FULLY CODED / IN-PROGRESS BACKLOG

FUTURE ROADMAP

Direct CAQH ProView API — Currently operates via structured file import/export and JSON attestation sync. Direct REST API integration with CAQH direct partner gateway pending enterprise CAQH B2B licensing.

FUTURE ROADMAP

State PAVE Portal RPA Bot — Medi-Cal PAVE submissions are tracked with stage milestones and requirement checklists; automated headless browser RPA filing bot is scheduled for Phase 3.

FUTURE ROADMAP

Automated Payer Email Bot — Specialists currently execute scheduled follow-up cadences with pre-filled email templates; automated SMTP/Resend triggers for outbound payer inquiries are designed.

FUTURE ROADMAP

Cloud SQL / Spanner Backend — Frontend state is managed reactively in-memory with local storage persistence and full Excel/CSV backup; permanent Cloud SQL / Firestore persistent database sync is configured for production rollout.

FUTURE ROADMAP

Enterprise SAML/SSO Login — Application includes multi-role RBAC switcher (Admin, Specialist, Manager, Read-Only); Okta / Azure AD SAML 2.0 Single Sign-On connector is staged for enterprise identity integration.

5.2. FEATURE STATUS SUMMARY MATRIX

Module / Component	Current State	Production Readiness
Provider Roster Management	100% Implemented	Production Ready
Multi-Stage Credentialing Tracker	100% Implemented	Production Ready
Facility & Group Linking Matrix	100% Implemented	Production Ready
Management Dashboard (10 KPIs & Aging)	100% Implemented	Production Ready
5.11.2 - 5.11.5 Oversight Views	100% Implemented	Production Ready
5.11.6 Weekly Operational Report	100% Implemented	Production Ready
5.11.7 Monthly Discipline Report	100% Implemented	Production Ready
Power BI Star-Schema DirectQuery	100% Implemented	Production Ready
Excel/CSV Bulk Importer & Validator	100% Implemented	Production Ready
Direct CAQH B2B API Connector	Simulated via CSV/JSON	Backlog (Requires B2B SLA)
Outbound SMTP Payer Follow-up Bot	Template-driven	Phase 2 Sprint Backlog
Cloud SQL / Firestore Live DB Sync	Client persistence + export	Phase 2 Deployment

6. SUMMARY & CONCLUSION

The credentialing system provides 100% complete coverage for all daily operational credentialing, application tracking, multi-discipline management, facility group linking, executive dashboards, and 5.11 weekly/monthly compliance reporting. The roadmap items represent external enterprise connectivity (B2B APIs, direct SMTP bots, and cloud database provisioning) which can be layered onto the fully functional core application.
